**ANODE STRUCTURE FOR METAL AIR ELECTROCHEMICAL CELLS AND
METHOD OF MANUFACTURE THEREOF**

Examiner: Yuan S.N. 10/074,873 Art Unit: 1745 March 19, 2004

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Berger (US 3,647,542).

With respect to claim 1, Berger teaches a method for producing a zinc-air battery, wherein each cell having alternate rows of zinc electrode (22) and air electrodes (20). As shown in Figure 1, the honeycomb separator retains and permits transfer of electrolyte ions, but prevents transfer of electrode ions, such as zinc ions. An aqueous potassium hydroxide solution can be introduced into the honeycomb to impregnate the walls thereof and the active zinc electrode material by vacuum soaking or by other conventional procedures. See Column 3, Line 70 to Column 4, Line 5, Column 6, Lines 19-30; Examples 1-3.

With respect to claims 2,3, Berger also teaches a method of placing a vacuum-tight tool over the honeycomb to enable evacuation of the honeycomb, and when evacuated, the electrode material can be injected into the honeycomb cells. Alternatively, aqueous electrolyte is introduced after incorporation of the catalyst and active electrode materials into the cells of the

honeycomb when the cell is subjected to a vacuum treatment. See Column 5, lines 63-70;
Column 6, Lines 19-30.

With respect to claim 4, the anode within the cell is subjected to (atmospheric) pressure after releasing the vacuum. See Column 6, Lines 19-30.

With respect to claim 5, the separator and anode are confined to a mold of honeycomb structure as shown in Figure 1. See Column 6, lines 19-40.
